

```
1 import java.util.Scanner;
2
3 public class ForLoopPractice {
4
5     public static void main(String[] args) {
6
7         //for loop is the to use if you know how many times you want something to run
8
9         for(int i = 0; i < 10; i++) {
10             System.out.println(i);
11         }
12
13         Scanner scan = new Scanner(System.in);
14
15         System.out.println("How large of a box do you want to make?");
16         int size = scan.nextInt();
17
18         for(int q = 0; q < size; q++) {
19             for(int i = 0; i < size; i++) {
20                 System.out.print("* ");
21             }
22             System.out.println();
23         }
24     }
25
26 }
```
