```java
package club.westcs.OldMrYoung;

public class Ox extends Animal{ // extends means that this class inherits
    // all protected and public stuff (Attributes, Methods, Constructor)
//Attributes were inherited

//Constructor
public Ox() {
    this.type = "oxen";
    this.sound = "grunt";
}

@Override // a special comment saying you are overriding a parent class method
public void runSong() {
    if(this.number == 1 ) {
        this.type = "ox";
    }
    super.runSong(); // super.anyMethod() runs the parent class version of the method.
}

}
```
